RE: WT Docket No. 14-100, Spectrum Networks Group and M2M Spectrum Networks

Dear Ms. Dortch,

I am writing this letter to you in support of M2M Spectrum Networks and to respectfully request that the Commission grant its 900 MHz applications so that it may use these licenses for a dedicated, nationwide machine to machine communications network.

As an applications software provider that integrates with such wireless technologies, we see huge benefits to the American public and business environment from the provision of the new network platform as proposed by M2M Spectrum Networks. A dedicated machine-to-machine network as built out by M2M will not only be more cost effective and operationally effective than existing technologies, but more importantly, it will allow new services to be provided that were not economically feasible previously.

These new services running over the proposed network will potentially encompass the health, travel, security, logistics, environmental industries and many more, thereby enhancing opportunities and improving quality of life and choice for American society as a whole.

I have found Barclay Knapp and his team at M2M Spectrum Networks highly professional and extremely credible. I have no doubt that the network being created will put this spectrum to a more effective use for the American people and economy than it is currently been allocated for.

Accordingly I respectfully ask the Commission to grant M2M's 900 MHz license applications as soon as practicable so that the M2M network can be built out in a timely manner.

Sincerely

John Davies
President
